1. Overview

Lucie is a web-based AI writing assistant built specifically for Lucent Brokerage's social media marketing. It solves a simple but constant problem: coming up with fresh, on-brand, compliant social media content on a regular basis without starting from a blank page every time.

Instead of staring at an empty caption box, Joseph or his staff can ask Lucie for a single post idea, a matching graphic, or an entire week's (or month's) worth of scheduled content, and get a ready-to-review draft back in under a minute.

Every piece of writing it produces automatically follows mortgage-industry compliance rules (fair housing language, no fabricated rates or guarantees, RESPA-sensitive co-marketing language) and always ends with Joseph's required licensing footer, so nothing goes out missing the legally required disclosures.

Content can also be scheduled directly onto a built-in content calendar, so the whole team can see at a glance what's planned and when.

Lucie is a drafting assistant, not an autopilot — every draft is meant to be read and approved by a human before it's ever posted publicly. That expectation is covered in more detail in “Limitations & What to Check” and “Safe & Responsible Use.”

2. Who It's For

This manual assumes no coding or technical background whatsoever — if you can use a normal website (click buttons, type in a text box, fill out a form), you can use Lucie.

Primary user

Joseph Kim — uses it directly to draft social posts, graphics, and content calendars for Lucent Brokerage.

Secondary users

Any staff member at Lucent Brokerage who helps manage social media posting can use the same link and the same brand settings — there are no separate logins or accounts per person (see “Getting Started”).

What you need to know before you start

- No installation, no account, no password — it's a single web link.
- Everything Lucie writes is a draft. A person must read it before it's posted.
- The tool remembers your chats and calendar only on the device/browser you used — see “Limitations & What to Check” before assuming it's backed up somewhere.

3. Getting Started / Setup

Lucie requires no signup, no password, and no installation. There is exactly one thing you need: the link.

What you need	Where to find it
The Lucie web link	https://lucie-smm-ai.vercel.app/
A device with a modern web browser	Any laptop, phone, or tablet with Chrome, Safari, or Edge
Nothing else	No account, API key, or install is needed on your end

Note: Bookmark the link above once you open it — that's the only “account” you'll have.

First time on a new device or browser

The very first time you open the link on a given device/browser, you'll land on a Persona Selector screen instead of the chat. This is a one-time setup step for that device.

1. Open the link and you'll see the Persona Selector, showing the existing “The Business Owner” brand-voice profile.
2. Click anywhere on that profile card (not the small pencil icon) to open its Brand Voice settings.
3. Review the Core Values, Tone of Voice sliders, and Target Audience fields. You can leave these as-is or adjust them — they control how Lucie writes (see below).
4. Click the blue “Set Brand Guidelines” button at the bottom to continue.
5. You'll land in the main Chat screen, ready to use.

The Persona Selector screen — the first thing you see on a new device.

 **Lucie:** Lucent's AI Social Media Assistant Brand Setup

[← Back to personas](#)

BO Editing brand voice for **The Business Owner**

01 Brand Voice

Core values
What principles guide everything your brand does?

e.g. Transparency, open communication, radical honesty about limitations...

02 Tone of Voice

Age range: 25-45

Brand Voice / Tone of Voice / Target Audience setup screen.

 **Lucie:** Lucent's AI Social Media Assistant Brand Setup

Professional	1	2	3	4	5	Casual
Authoritative	1	2	3	4	5	Conversational
Serious	1	2	3	4	5	Humorous
Matter of Fact	1	2	3	4	5	Enthusiastic

03 Target Audience

Age range: 25-45

1  100

Household income Highest education attained

Under \$100k High school

Pain points

e.g. Last minute underwriting demands and lack of transparency around costs and fees.

Set Brand Guidelines

Scroll to the bottom and click "Set Brand Guidelines" to finish setup and enter the Chat screen.

Note: This setup screen reappears every time you start a brand-new chat, since each new chat needs a persona assigned to it — just repeat steps 2–4 above. It only takes a few seconds.

Revisiting your brand settings later

Click the "Brand Setup" button in the top-right corner of the header at any time to go back and adjust the Core Values, Tone of Voice, or Target Audience settings.

4. How to Use It

This section walks through every main task, one action per step, with a screenshot for each key step. All of the exact button names below match what you'll see on screen.

Task A — Ask Lucie for a single post idea or caption

- Click “Chat” in the left sidebar.
- Click into the message box at the bottom of the screen and type your request (for example: “Write me a LinkedIn caption about DSCR loans”).
- Click “Send.”

Typing a request into the message box before clicking Send.

Lucie will show a short “On it!” style message right away. If your request takes more than about 10 seconds, that message is replaced by a rotating tip — this is normal, especially for longer requests.

The loading indicator that appears while Lucie is working.

If your request is too vague for Lucie to act on directly (missing a topic, platform, or format), she'll respond with “A few quick questions” instead of a draft.

- Click an answer option for each question shown (or type your own answer in the text box).

10. Click “Continue.”

The screenshot shows the Lucie AI chat interface. On the left is a sidebar with the user's profile (Lucie, Lucie's AI Social Media Assistant), a 'The Business Owner' tag, and a list of chat sessions. The main chat area shows a conversation titled 'LinkedIn Caption DSCR Loans' from August 10, 2026, at 8:16 PM. A form titled 'A few quick questions' with '2 questions' is displayed. The first question is 'What angle should this DSCR loan post take?' with five radio button options: 'What DSCR loans are (educational intro)', 'Myth-busting a common DSCR misconception', 'Case study: complex investor scenario solved', 'Why business owners/investors use DSCR over conventional', and 'Market update relevant to DSCR investors'. The second question is 'What format should this LinkedIn post be?' with four radio button options: 'Text-only post', 'Single image', 'Multi image Carousel', and 'Short video / Reel'. A 'Continue' button is at the bottom of the form, and a 'Regenerate' button is below it.

“A few quick questions” — Lucie asking for the topic, platform, and format before writing anything.

This screenshot is identical to the previous one, but the 'Continue' button is now highlighted in dark blue, indicating it has been clicked. The 'What angle should this DSCR loan post take?' question has 'What DSCR loans are (educational intro)' selected with a filled radio button. The 'What format should this LinkedIn post be?' question has 'Text-only post' selected with a filled radio button. The 'Continue' button remains highlighted.

Answers selected and ready — click Continue to generate the post.

Lucie then generates a “Post Idea” card containing the full draft.

A generated Post Idea card.

The full script (Hook / Body / CTA) and the required compliance footer at the bottom of every draft.

Creative direction, quick details, and hashtags shown below the script.

See “Understanding the Output” for what each part of this card means, and always read a draft fully before using it — see “Safe & Responsible Use.”

Task B — Generate a matching graphic for a post

11. On a generated post card, click “Generate social image.”
12. Wait a few seconds while Lucie designs the graphic.
13. Use “Regenerate” to try a different version, or “Download PNG” to save the image to your device.

Regenerate Download PNG

Draft ready

Save to Calendar Copy

A generated social graphic with Regenerate and Download PNG buttons.

Task C — Save a post to the Calendar

14. On a generated post card, click “Save to Calendar.”
15. Pick a date and a time in the fields that appear.
16. Click the checkmark (✓) to confirm.

The “Save to Calendar” button on a post card.

Choosing a date and time before confirming.

Once saved, the button changes to “Update Saved Calendar” — you can click it again later to change the date/time for that same post.

The button reads “Update Saved Calendar” once a post has been saved.

Task D — View and manage the Calendar

17. Click “Calendar” in the left sidebar to see the month view.
18. Click any post on the calendar to open its full details.
19. Click “+ New Entry” (top right) to manually add a post to the calendar without going through Chat.
20. Click “Clear Calendar” (top right) to remove posts.

The Business Owner Image
Lucie: Responsive Pre-Approval Start

The Calendar page, showing scheduled posts across the month.

Sun	Mon	Tue	Wed	Thu	Fri	Sat
26	27	28	29	30	31	1
2	3	4	5	6	7	8
9	10	11	12	13	14	15
16	17	18	19	20	21	22

Scheduled posts:

- August 27: Inst... Educational... Video
- August 10: Link... Self-emplo... Text
- August 17: Inst... Home buyi... Multi Image Carousel
- August 18: Inst... Responsive... Image PM

Clicking a calendar entry opens its full details.

Clear Calendar offers three scopes: “Clear a specific day,” “Clear a specific week,” or “Clear everything.” Pick a scope, confirm the date shown, and click “Clear.”

Note: Clearing the calendar permanently deletes those entries and cannot be undone. Double-check the scope and date before confirming — see “Safe & Responsible Use.”

The Clear Calendar confirmation — this action is permanent.

Task E — Build a full content calendar (multiple posts at once)

21. In Chat, describe the calendar you want (for example: “Build me a 1-week LinkedIn and Instagram content calendar”).

22. Answer the platform and posting-cadence questions Lucie asks — these two are always asked for a full calendar, even if you've answered similar questions before.
23. Review the Content Strategy, Platform Breakdown, and Content Calendar cards Lucie returns.
24. Click “Save to Calendar” at the top of the Content Calendar card to add every post at once.

The Content Strategy card — the themes (“pillars”) Lucie is building the calendar around.

The Platform Breakdown card — which platforms, how often, and the best times to post.

One expanded entry inside the Content Calendar card, showing a full caption ready to review.

Task F — Get a video script instead of a caption

When Lucie asks “What format should this post be?”, choose “Short video / Reel” instead of a caption-style format. Lucie will generate a scripted intro / body / call-to-action breakdown plus filming guidance (setting, camera framing, lighting, on-camera energy) instead of a caption. Joseph still needs to film the video himself — this is a script and shot list, not a finished video.

Task G — Rename or delete a chat

25. Hover your mouse over any chat in the left sidebar.
26. Click the pencil icon to rename it, or the trash can icon to delete it.
27. If renaming: type the new name and click the checkmark to save.
28. If deleting: confirm in the pop-up. This cannot be undone.

Hovering a chat in the sidebar reveals rename and delete icons.

Task H — Start a brand-new chat

29. Click “+ New Chat” in the left sidebar.
30. Select the persona to use for this chat.
31. Click “Set Brand Guidelines” to begin (see “Getting Started”).

5. Worked Examples

Example 1 — A single LinkedIn caption about DSCR loans

Input: “Write me a LinkedIn caption about DSCR loans”

32. Lucie asked two quick questions: which angle to take on the DSCR topic, and what format the post should be. We chose “What DSCR loans are (educational intro)” and “Text-only post.”
33. Lucie returned a complete LinkedIn post: a hook (“A rental property should be able to speak for itself financially...”), a multi-paragraph educational body explaining DSCR loans, a call-to-action inviting readers to schedule a consultation, four hashtags, and the required licensing footer.
34. We clicked “Generate social image” and received a matching dark-themed graphic titled “What Is a DSCR Loan?”
35. We clicked “Save to Calendar,” picked a date and time, and confirmed — the post now appears on the Calendar page ready to publish.

Output (the exact caption Lucie generated in this example):

Note: “A rental property should be able to speak for itself financially. For many investors, that is exactly the point of a DSCR loan.”... (full explanation of how DSCR loans are qualified)... “If you are evaluating financing options for an investment property and want to understand whether a DSCR loan fits your situation, schedule a consultation to review the details together.” Joseph Kim | NMLS #684894 | DRE #02190229 | Equal Housing Opportunity

Example 2 — A one-week LinkedIn + Instagram content calendar

Input: “Build me a 1 week LinkedIn and Instagram content calendar, normal posting cadence, general brand awareness goal, use placeholders for testimonials”

36. Lucie asked one follow-up question (which specific Non-QM topic angle to focus the week on); we chose “No preference, you choose.”
37. Lucie returned a Content Strategy titled “Content Strategy — Joseph Kim, Lucent Brokerage” built around four content pillars: Educational (40%), Myth-Busting (20%), Trust and Process (20%), and Proof and Social Trust (20%).
38. The Platform Breakdown recommended LinkedIn 4x/week (Tue 11am–5pm, Wed 11am–4pm, Thu 11am & 1–5pm) and Instagram 2x/week (Tue 1–7pm, Wed 12–9pm, Thu 12–2pm).
39. The Content Calendar contained 7 fully written posts, one per scheduled slot, each with its own caption, hashtags, and platform tag.
40. We clicked “Save to Calendar” once at the top of the card, and all 7 posts were added to the Calendar page in a single click.

6. Understanding the Output

Every generated post card is broken into the same labeled sections, so you always know where to look:

Section	What it means
Hook	The opening line — designed to stop the scroll and earn a read.
Body	The main explanation or value delivered. For carousel posts, this is a series of slide-by-slide texts instead of one block.
CTA (Call to Action)	The closing line telling the reader what to do next (e.g. “schedule a consultation”).
Footer	The fixed compliance line — “Joseph Kim NMLS #684894 DRE #02190229 Equal Housing Opportunity” — required on every single piece of content, word for word.
Creative Direction	Suggested setting, camera, lighting, energy, background, and clothing — mainly relevant for video or image posts; shows “N/A” for fields that don't apply to a text post.
Quick Details	A one-line summary of the tone and the call-to-action, useful for skimming a post without reading the full script.
Hashtags	3–5 hashtags chosen to fit the platform and topic.
Platform badge	Which platform (LinkedIn, Instagram, Facebook, or TikTok) this draft was written for.

What a good result looks like

- On-topic and matches the platform and format you asked for.
- Reads in Joseph's brand voice — professional, authoritative, matter-of-fact, not hype-y or salesy.
- Contains the exact compliance footer, unedited.
- Contains no specific interest rates, APRs, fees, or approval guarantees unless you supplied them yourself.
- Any client story or statistic is clearly a placeholder (e.g. “sample scenario”) unless you gave Lucie a real one to work with.

Compliance notes

Occasionally a draft will come back with a red “Compliance note” warning appended to the bottom. This means Lucie's built-in safety check flagged something — a possibly sensitive phrase, a forbidden word, or an attempted pricing claim — and either removed it or is asking for a human review. Treat any draft with a compliance note as not ready to post until it's been reviewed.

7. Limitations & What to Check

Lucie is genuinely useful, but it has real limits. Know these before you rely on it day to day.

- Lucie can be wrong, generic, or miss the mark on tone — always read every draft before posting it, the same way you'd review anything a junior team member wrote.
- It will not intentionally invent a specific interest rate, APR, fee, or approval guarantee (this is blocked by design) — but always double-check any number that does appear.
- Any “client success story” or testimonial in a draft is a placeholder unless you gave Lucie a real one — never publish a placeholder story as if it were a real client.
- Only one brand-voice profile (“The Business Owner”) is currently configured. If Lucent Brokerage wants to target a different type of client with a different tone, a new persona would need to be set up under “Brand Setup.”
- Video “scripts” are a shot list and script to film from — not a finished video. Generated graphics are template-based images, not photography.
- There is no login or account system — anyone with the link can open and use the tool exactly as Joseph would. Don't share the link publicly.

The most important limitation: where your data lives

Chat history, saved calendar entries, and brand settings are stored only inside the specific web browser on the specific device you used — not on a server, and not shared between devices.

- Clearing that browser's history, cookies, or site data will permanently delete everything.
- Opening the link on a different computer, phone, or even a different browser on the same computer starts completely fresh, with no saved chats or calendar.
- There is currently no way to back this up or transfer it between devices.

Note: Until this changes, treat the tool as tied to one specific browser on one specific device. Don't clear that browser's data, and use the same device/browser every time you need your history or calendar.

8. Safe & Responsible Use

What NOT to enter

- Never type a real client's personal information into the chat — no Social Security numbers, account numbers, full addresses, income figures, or medical/financial specifics. Treat the chat box like a text message, not a secure system.
- Don't ask Lucie to name a specific interest rate, discount, or promotional offer. The tool is designed to refuse or flag this automatically — don't try to phrase around it.
- Don't paste in anything you wouldn't want to see appear, worded slightly differently, in a public social media post.

What needs human review before a customer sees it

- Every single draft, every time — no exceptions, even ones that look perfect at a glance.
- Any draft with a “Compliance note” warning attached — read the flag and resolve it before publishing.
- Anything referencing a specific neighborhood, buyer type, family situation, or protected characteristic — mortgage advertising has strict fair-housing rules, and an AI draft is not a substitute for a compliance check.
- Any testimonial, case study, or client story — confirm it's either a real story with permission to use, or clearly labeled as a hypothetical example.
- Anything touching a co-marketing arrangement, referral partnership, or “refer a friend” style program — these have specific legal rules (RESPA) that a human needs to sign off on.

9. Troubleshooting & FAQ

Problem	Fix
I see "Sorry, I could not generate a response."	This usually means a temporary connection hiccup. Wait a few seconds and send your message again. If it keeps happening, contact support (see "Support & Handoff").
Nothing happens after I click Send.	Check your internet connection and refresh the page. Note: refreshing does not lose anything already saved to the Calendar, but an unsent message in the box will be lost.
The generated post feels generic or missed what I wanted.	Be more specific in your first message (name the exact topic, audience, and platform), or answer the clarifying questions with more detail instead of the broadest option.
My chat history or calendar disappeared.	This almost always means the browser's data was cleared, or you're on a different device or browser than before — see "Limitations & What to Check." There is currently no way to recover it.
The tool feels slow, especially for a full content calendar.	This is normal — a full calendar can take 20–30+ seconds. You'll see a rotating tip appear after about 10 seconds while it works.
I want to change Joseph's tone/brand voice.	Click "Brand Setup" in the top-right corner any time to adjust Core Values, Tone of Voice, and Target Audience.
I accidentally deleted a chat or calendar entries.	Deletions are permanent and cannot be undone — double-check the scope before confirming any delete or Clear Calendar action next time.

10. Costs & Maintenance

Lucie uses Anthropic's Claude AI model behind the scenes, and each request has a small, usage-based cost billed to the Anthropic account tied to this project.

Typical costs (measured directly against this tool)

Action	Typical cost
A single caption, clarifying-question round, or graphic	roughly \$0.003 – \$0.03
A full 2-week content calendar	roughly \$0.12 – \$0.18

Note: These are measured estimates, not a guarantee — actual cost depends on how detailed the request is and can shift if Anthropic changes its pricing.

How to check real spending

41. Log into the Anthropic Console at console.anthropic.com using the account tied to this project.
42. Open the usage/billing dashboard.
43. Filter usage to the specific API key this project uses — by default the dashboard shows spending across every key on the account, which can make costs look higher than they actually are for this tool alone.

Hosting costs (separate from AI usage)

- Frontend hosting: Vercel.
- Backend hosting: Render, on a paid “Starter” tier (roughly \$7/month) to avoid slow cold-start delays.

There are currently no usage limits or spending caps configured — cost scales directly with how much the tool is used. If cost becomes a concern, contact support below to discuss adding limits.

11. Support & Handoff

This tool was built by a team from the Titan Applied AI and Entrepreneurship Summer Fellowship:

- Arman Kiai
- Ken Knight
- Andy Chau
- Jaime A. Garcia
- Cody Le

Ongoing support contact

Name	Email	Phone
Arman Kiai	akiai@csu.fullerton.edu	(949) 423-4246

Reach out to the contact above for questions, bug reports, or requests to change how the tool works after the fellowship ends.

Where the code and files live

The complete source code is hosted on GitHub: <https://github.com/armank1369/mortgage-marketing-AI>

Any future developer picking this project up will need to be granted access to this repository, plus the Vercel and Render hosting accounts and the Anthropic API key, to make changes or view logs.

How it's hosted

Piece	Where it runs
Website (frontend)	Vercel
AI/backend server	Render
AI model	Anthropic (Claude)
Chat history & calendar data	Stored locally in each user's web browser — not on a server (see “Limitations & What to Check”)

12. Glossary

Term	Plain-language meaning
AI / AI model	Software (Claude, made by a company called Anthropic) that reads a request and writes text or generates content in response — similar to a very well-read assistant.
Prompt	The written instructions behind the scenes that tell the AI model how to write in Joseph's brand voice and follow compliance rules. You don't need to write or edit these.
Persona	A saved profile describing a type of client Joseph is writing content for. Currently one exists: "The Business Owner."
Brand voice	The tone and style settings (professional vs. casual, serious vs. humorous, etc.) Lucie follows when writing, set under "Brand Setup."
Clarifying questions	Short multiple-choice questions Lucie asks when a request doesn't give her enough to work with yet.
Content calendar	The built-in scheduling view showing which posts are planned for which dates.
Campaign	A full batch of posts (a content strategy plus a calendar of individual posts) generated together, instead of one post at a time.
Compliance note	An automatic warning added to a draft that may need legal/compliance review before it's published.
Footer	The required line — "Joseph Kim NMLS #684894 DRE #02190229 Equal Housing Opportunity" — that must appear, unedited, on every piece of content.
NMLS / DRE	License ID numbers required by law to appear on mortgage marketing materials.
Local storage / browser storage	Where this tool saves your chat history and calendar — inside your specific web browser on your specific device, not on a server.
API / API key	The technical connection and credential that lets this tool talk to Anthropic's AI model. Usage through this connection is billed per request.
Render / Vercel	The two hosting services that keep this tool live on the internet.
